THE EAGLE

**THE EAGLE TITAN Handheld stabilizer** is a wonderful extra-light jewel, designed for any camera weighing up to **6.6 pounds**. The TITAN is manufactured with the best modern materials. The gimbal, heart of the stabilizer, is made of Titanium - hence the name - and Tungsten Carbide, the body is in Carbon Fiber and black and blue Soft-touch Aluminum. The TITAN weighs **a little more than a pound only!**

The titanium gimbal is machined with a 0.008 inch precision. Tungsten Carbide, one of the hardest materials after diamond and much more solid than the latter, makes the gimbal durable and frictionless - a slight lateral impulsion is enough to make it spin almost endlessly.

The balance center of the gimbal has been designed to be as close as possible from the base of the camera, so as it can be balanced with a minimum of counterweight. Thus, carrying THE TITAN requires **a minimum of effort** and endurance.

THE TITAN features a topstage with silky-smooth for-aft and side-to-side **micrometric** adjustment knobs.

The TITAN's body unfolds in three parts, so you can modify the shape and angle of the arc at will and move very easily the counterweights to the required dynamic balance position. What's more, this three-part body allows you to fold it into a **very compact size: 8.5x4.3x4.1"**.

But the TITAN is not just the perfect tool to achieve gorgeous stable tracking shots. Modify the angle of the arc, add a shoulder supporting part and a double-handle support: you get a **shoulder support** for light cameras! Essential to successfully manage static lock-off shots with small cameras!

The TITAN and its accessories come in a small brushed aluminium case.

Finally, the TITAN can be updated into a **complete body-mounted stabilizing system**, with the harness-belt and the LTX shock absorbing arm, specially designed for it. Thus, the operator is released from the weight. Shooting
